

Yide Zhang

B113 Keck Laboratory ◇ Pasadena, CA 91125

(574) · 303 · 8498 ◇ yzhang34@caltech.edu

TRAINING AND EDUCATION

California Institute of Technology, Pasadena, California USA

Postdoctoral Scholar, Medical Engineering

2019 - Present

University of Notre Dame, Notre Dame, Indiana USA

Doctor of Philosophy, Electrical Engineering

2014 - 2019

Master of Science, Electrical Engineering

2014 - 2017

Dissertation: *Super-Sensitivity and Super-Resolution Quantitative Multiphoton Microscopy*

Huazhong University of Science and Technology, Wuhan, China

Bachelor of Engineering, Automation *with Highest Honors*

2010 - 2014

Thesis: *Research on Memristor-Based Memory Networks and Computing Technology*

RESEARCH EXPERIENCE

Caltech Optical Imaging Laboratory

2019 - Present

Postdoctoral Scholar

Advisor: Lihong V. Wang, Ph.D.

Pasadena, California USA

- Development of novel phase-contrast compressed ultrafast photography (CUP), a technique that images light-speed phase change signals in a single shot with up to 350 frames captured at up to 1 trillion frames per second; the technique will be used to image the light-speed propagation of action potentials inside myelin sheaths of myelinated axons.
- Development of universally-calibrated photoacoustic topography through an ergodic relay (PATER), a method that uses a single-element ultrasonic transducer to capture a wide-field photoacoustic image with a single laser shot at a 1 kHz frame rate; this method will be used for real-time monitoring of human vital signs, novel biometrics based on blood vessels, and fast, label-free tissue histology.

Biophotonics Research Group

2014 - 2019

Research Assistant

Advisor: Scott S. Howard, Ph.D.

Notre Dame, Indiana USA

- Developed a theoretical framework for optimizing the SNR of multiphoton frequency-domain fluorescence lifetime imaging microscopy (FD-FLIM) and verified the results with Monte Carlo simulations.
- Experimentally demonstrated a super-sensitivity FD-FLIM technique with a two-fold improvement in imaging speed compared to the theoretical limit of conventional FD-FLIM.
- Theoretically analyzed the lifetime measurement error in FD-FLIM under fluorophore saturation conditions and experimentally demonstrated a method for eliminating this error.
- Invented stepwise optical saturation (SOS), a super-resolution fluorescence microscopy technique that could be easily implemented and required neither additional hardware nor complex post-processing.
- Generalized the concept of SOS and experimentally demonstrated the first implementation of super-resolution imaging in FD-FLIM.
- Combined deconvolution with SOS (DeSOS) to image cells in their native physiological environment and provided an open-access application for the generation of DeSOS images.
- Constructed the Fluorescence Microscopy Denoising (FMD) dataset that consisted of 12,000 real fluorescence microscopy images; it was the first microscopy image dataset dedicated for Poisson-Gaussian denoising and had been used to benchmark conventional and deep learning based denoising methods.
- Developed a novel and unbiased approach to segment FLIM images automatically by K-means clustering of FLIM phasors and demonstrated successful image segmentation on 2D and 3D FLIM images of fixed cells and living animals acquired with two different FLIM systems.

- Demonstrated that super-resolution radial fluctuations (SRRF), a super-resolution fluorescence microscopy technique, can be used to enhance the resolution of transmission electron microscopy images.
- Invented instant FLIM, a method that allows real-time acquisition and display of two-photon intensity, lifetime, and phasor imaging data; it was used to generate the first in vivo four-dimensional (4D) FLIM movies of mouse and zebrafish glial cell response to injury over 12 hours through intact skulls.
- Took charge of the design, budget, construction, and demonstration of all the experimental setups mentioned above; built the hardware and wrote the software from scratch.
- A news article about my Ph.D. research: <https://ee.nd.edu/thewire/articles/your-motivation-matters-engineering-to-heal>

National Key Laboratory of Image Processing & Intelligence

2012 - 2014

Research Assistant

Advisor: Zhigang Zeng, Ph.D.

Wuhan, China

- Simulated neural activities including learning, associative memory and forgetting in a memristive neural network with integrate-and-fire CMOS neurons and spike-rate-dependent plasticity synapses.
- Implemented exponential adaptive lag synchronization of two memristive neural networks using fuzzy methods.

TEACHING EXPERIENCE

Kaneb Center for Teaching and Learning, University of Notre Dame 2018

- Certified participant of the Teaching Well Using Technology program that teaches faculty and graduate students how to use multi-media technology tools such as presentations, audios, videos, and digital timelines in an educational setting to enhance teaching and learning.

Biophotonics Research Group, University of Notre Dame 2017-2019

- Trained undergraduate and first-year graduate students how to perform confocal, two-photon, and fluorescence lifetime imaging experiments using commercial and custom-built microscopes.

Clay Intermediate Center, Clay International Academy 2016

- Participated in an outreach program to go to middle school classrooms and demonstrate cool optics demos and principles to students and inspire them to pursue a career in science.

Department of Electrical Engineering, University of Notre Dame 2015

- As a teaching assistant of EE 30342 - Microelectronic Circuit Design, graded homework, ran weekly Q&A sessions, and assisted undergraduate students in performing microelectronic experiments.

School of Automation, Huazhong University of Science and Technology 2014

- Mentored six undergraduate students to complete their undergraduate thesis projects.

SELECTED AWARDS AND HONORS

2020	IOP Publishing Outstanding Reviewer Award , IOP Publishing, Bristol UK
2019	NDIIF Best Biological Imaging Publication Award 2018 , Featured News Notre Dame Integrated Imaging Facility (NDIIF), Indiana USA
2019	CRC Award for Computational Sciences and Visualization , Featured News Center for Research Computing (CRC), University of Notre Dame, Indiana USA
2019	JenLab Young Investigator Award , Featured News Multiphoton Microscopy in the Biomedical Sciences XIX, SPIE Photonics West
2018	James L. Massey Travel Grant , Department of Electrical Engineering, University of Notre Dame, Indiana USA
2018	Poster Contest Third Prize , Seventh Annual Harper Cancer Research Institute Research Day, Indiana USA
2017	Best Presentation Award , IEEE Annual Mini-symposium on Electron Devices and Photonics, Indiana USA
2017	Berry Family Foundation Graduate Fellowship , Featured News Advanced Diagnostics and Therapeutics (AD&T), Indiana USA
2017	2016 Graduate Student Research Award (One Awardee at NDEE), Department of Electrical Engineering, University of Notre Dame, Indiana USA
2017	Best Poster Award , NDnano Symposium, University of Notre Dame, Indiana USA
2014	Outstanding Undergraduate Thesis Award (Ranking 1/205), Huazhong University of Science and Technology (HUST), Wuhan, China
2013	Meritorious Winner , Mathematical Contest in Modeling (MCM), Consortium for Mathematics and Its Applications (COMAP)
2013	Decent Capital's Scholarship (Top 0.1%), Decent Capital
2011-2013	National Scholarship ×3 (Top 1%), Ministry of Education of China
2012	Prominent Student Award (Top 1%), HUST, Wuhan, China

RESEARCH INTERESTS

Photoacoustic microscopy (PAM), photoacoustic computed tomography (PACT), compressed ultrafast photography (CUP), nonlinear microscopy, multiphoton microscopy (MPM), fluorescence lifetime imaging microscopy (FLIM), super-resolution microscopy, high-speed imaging, deep tissue imaging, adaptive optics, computational imaging, deep learning.
